DESCARTES™

Descartes Fleet Safety™

Prevent accidents, streamline safety operations and drive profitability

As fleets scale, they often lack the resources to proactively manage driver risk. The data is scattered across systems, and fleet operators don't have the capacity to analyse it. Preventable accidents occur, insurance costs go up and non-compliance creeps in.

Descartes Fleet Safety helps fleets proactively reduce driver risk. It centralises safety and driver data from your existing vendors into one unified platform. Using advanced AI and machine learning, the solution analyses your data to identify hidden patterns and emerging risks before they result in accidents.

Solution Area
Fleet Performance Management

About the Product
Scalable safety management system that centralises driver data to enable AI-powered predictions and coaching.

TOP BENEFITS

- Reduce safety expenses as you scale while maintaining safety and compliance.
- Make data management easy, so you can focus on drivers.
- Reduce accidents and claims by identifying and coaching at-risk drivers.

A single source of truth to identify and manage risk.

The solution proactively identifies at-risk drivers, giving safety teams clear visibility into where to focus their limited time and attention. From there, targeted coaching plans can be assigned, tracked and measured to drive meaningful behaviour change

The solution provides powerful analytics and reporting tools with actionable insights to understand trends, measure impact and make smarter, data-driven decisions.

FEATURES

Centralised data management

Centralise third-party data including telematics, cameras, HR, accidents, claims, drivers' hours compliance and more.

AI-powered predictive risk modelling

Use AI built on billions of miles of rich data to identify at-risk drivers and behaviours likely to cause an accident.

Driver development and coaching

Assign and track behaviour-specific coaching plans to automate workflows and prevent accidents.

Data insights and analytics

Customizable reporting and dashboards to drive insights that inform your safety programme.

BENEFITS

Reduce accidents

Identify at-risk drivers and behaviours to help prevent accidents before they take place.

Reduce insurance and claims costs

Minimise costly incidents and claims exposure.

Increased efficiency and ability to scale

Easily manage drivers, claims and events in one place, and save time with AI-powered recommendations.

Data-driven decision making

AI analyses risk and makes decisions based on 40 billion miles of telemetry and 500,000 accident records.
